2024 CUSTOMER REVIEW

Apex Industrial Systems

January-December 2024 / All six Apex sites

Synthetic customer example

Two of three targets met

Water intensity and repair activity met the example targets. Emissions per kilogram exceeded the target by about 7%.

Measure	Actual	Target and result
Water per kg washed	6.94 L/kg	≤ 7.00 L/kg · Target met
Emissions per kg washed	0.086 kg CO2e/kg	≤ 0.080 kg CO2e/kg · Target missed
Recorded repairs	5,556	≥ 5,500 · Target met

What to carry into the next review

Separate laundry and delivery emissions before choosing what to test. Compare intensity over equivalent periods and assign an owner for the follow-up.

Gaps in the 2024 archive

The archive lacks comparable figures for on-time service, invoiced cost and user feedback. Define the source and measurement period for each before setting the next targets.

Basis and scope

Actuals come from the synthetic Lindström customer data pack. The targets are fictional. Intensity divides allocated water or laundry and delivery emissions by kilograms washed. Repairs count recorded events.
